

Two new acridone alkaloids from *Glycosmis macrantha*

Abstract

Extraction and chromatographic separation of the extracts of dried stem barks of *Glycosmis macrantha* lead to isolation of two new acridone alkaloids, macranthanine and 7-hydroxynoracronycine, and a known acridone, atalaphyllidine. The structures of these alkaloids were determined by detailed spectral analysis and also by comparison with reported data.

Keyword: 7-hydroxynoracronycine; Atalaphyllidine; *Glycosmis macrantha*; Macranthanine
